

myData

With data from the Health Information Exchange, you can receive actionable and valuable insights on your patients with osteoarthritis and rheumatoid arthritis right in our application, myData.

You're faced with new challenges that require more information and better organization. Healthcare is getting more complicated. The industry's demands of providers are growing, but resources remain the same. Providers need tools to get ahead, but who has the time to build an analytics strategy?

myData is an innovative application that allows a user to easily access and understand their patient profiles, identify gaps in care, and see how they rank in quality measures.

HealthConnections' community data will combine with your patient information to help you get the most complete picture of your patient panel.

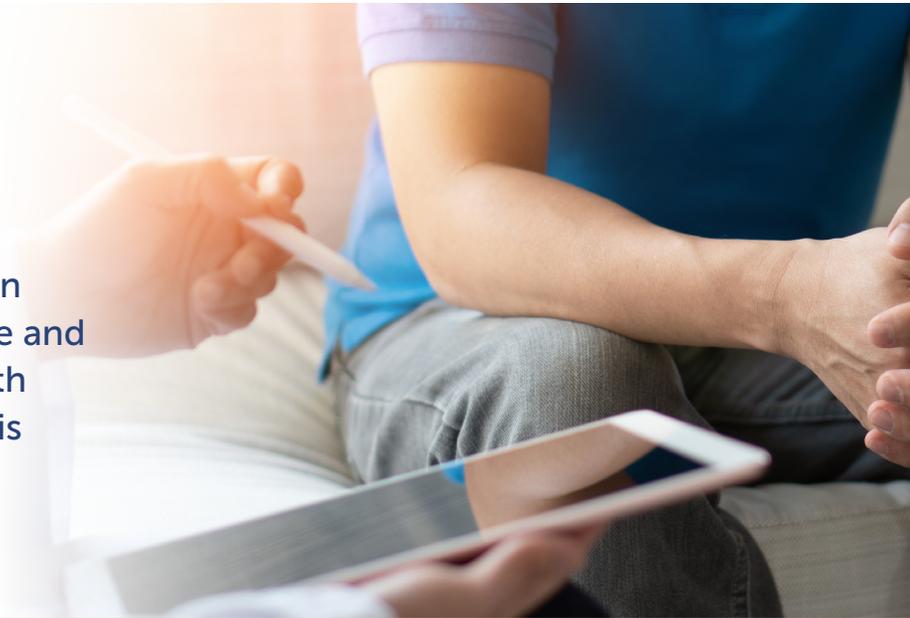

- ✔ **easy to use**
- ✔ **easy to understand**
- ✔ **ready to take action**
- ✔ **flexible and transparent**

to learn more about Patient Lookup and how it can help your organization, send us a message at info@healthconnections.org or call us at 315-671-2241 x5.

analytics-ready, comprehensive clinical registries

myData gives you registries that are actionable, because they are based on clinical practice standards. Users will be able to see:

- Uncontrolled or undiagnosed high blood pressure
- Osteoarthritis and rheumatoid arthritis
- Undiagnosed diabetes or prediabetes

With specifications embedded directly into the registries, you have more visibility to identify gaps and improve measures.

hospital & emergency utilization reports

Use registries to generate reports that will help you stay up-to-date on patient panel performance. With our detailed filtering capabilities, you can target patients with accuracy.

- Which patients have been in the hospital or Emergency Department (ED) ?
- Is the admission or ED visit unplanned?
- Was the patient readmitted to the hospital within a designated time period?
- How many days was a patient out of the hospital or ED before being readmitted?

calculating quality measures

Satisfying quality measurement requirements is critical for value-based payment. Track your performance against 8 commonly used performance measures that will provide helpful information whether you are participating in VBP or not. The data is timely, and the measurements are built into the reports as charts and graphs for easy visualization at any time. NOTE: HealtheConnections is a Centers for Medicaid and Medicare Services Qualified Registry (CMS QR) for MIPS/QPP reporting.

give us your data, we'll give it back

You're already sharing data with HealtheConnections. We'll organize and expand it with community-wide data into our Data Query tool, giving you a comprehensive view of your patient panel in simple, actionable dashboards.

Being able to use myData has helped us lower our Hospitalizations and ED visits considerably. Helping us to mainstream data and use that data to reach out to our patients has been a game changer for us. It is helping us accomplish our requirements for Patient-Centered Medical Home (PCMH) and give much better follow up care to our patient population.
